COMPUTER SYSTEMS CATALOG

Banshee Computer consulting uses custom configured Dell systems with high quality components that have been proven in the industry. In addition, Banshee approves components that have proven to be well performing, compatible, stable, and hassle-free. Banshee Computer takes pride in its computers and installs them with care and attention to detail.

WHY DOES IT MATTER?

Today, a computer is an appliance. Every day, people depend on their computers to get on the Internet or print important documents.

Computers from "Big Box Stores" package computer at competitive prices by using integrated and marginal quality components and by making "shady" software deals.

These computers typically run like older computers right out of the box! A price compromised computer system is not worth its value saved when it causes problems or fails prematurely.

Banshee computers are configured and optimized to attain maximal performance while still providing great value without making the compromises that big corporations do to make profits.

P.O. Box 381
